

Project Initialization and Planning Phase

Date	2 July 2026
Team ID	
Project Title	Credit Card Approval Prediction
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform the credit card approval process using machine learning, improving efficiency, accuracy, and consistency. It addresses delays and inaccuracies in traditional approval methods by providing intelligent, data-driven decision support. The proposed system enhances operational efficiency, reduces financial risk, and improves customer satisfaction through automated credit card approval prediction.

Project Overview	
Objective	The primary objective is to improve the credit card approval process by implementing advanced machine learning techniques, ensuring faster, more accurate, and consistent approval decisions.
Scope	The project comprehensively analyzes and improves the credit card approval process by integrating machine learning models that evaluate applicant information and predict approval or rejection efficiently.
Problem Statement	
Description	Addressing inaccuracies, delays, and inconsistencies in the traditional credit card approval process, which negatively affect operational efficiency, increase financial risk, and reduce customer satisfaction.
Impact	Solving these issues will improve approval accuracy, reduce processing time, minimize financial risks, enhance operational efficiency, and increase customer satisfaction.
Proposed Solution	
Approach	Employ machine learning techniques to analyze applicant information such as income, employment status, credit history, and financial background to accurately predict credit card approval decisions.
Key Features	- Implementation of a machine learning-based credit card approval prediction model.

	- Real-time decision-making for faster credit card approvals. - Continuous learning to improve prediction accuracy with new data.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computing Resources (CPU/GPU specifications, number of cores)	T4 GPU
Memory	Memory (RAM specifications)	8 GB
Storage	Storage (Disk space for data, models, and logs)	1 TB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	Development Environment (IDE)	Jupyter Notebook, pycharm
Data		
Data	Data Source, size, format	Kaggle Credit Card Approval Dataset, CSV
