Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Applicant – The applicant submits personal, financial, and employment details to apply for a credit card and receives the prediction result from the system.
Rectangle with numbered header	Process	Credit Card Approval Prediction System – The system validates the applicant's details, preprocesses the data, and uses a trained machine learning model to predict whether the credit card application will be Approved or Rejected.
Rectangle (solid fill, no number)	Data Store	Application Database – Stores applicant information for processing and future reference. Machine Learning Model – Stores the trained prediction model used to generate credit card approval decisions.
Labeled arrow	Data Flow	Represents the movement of data between the applicant, prediction system, application database, machine learning model, and the final prediction result. Examples of data flow include Application Details, Validated Data, Prediction Request, and Approval/Rejection Result.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
